

# Evolution Edges

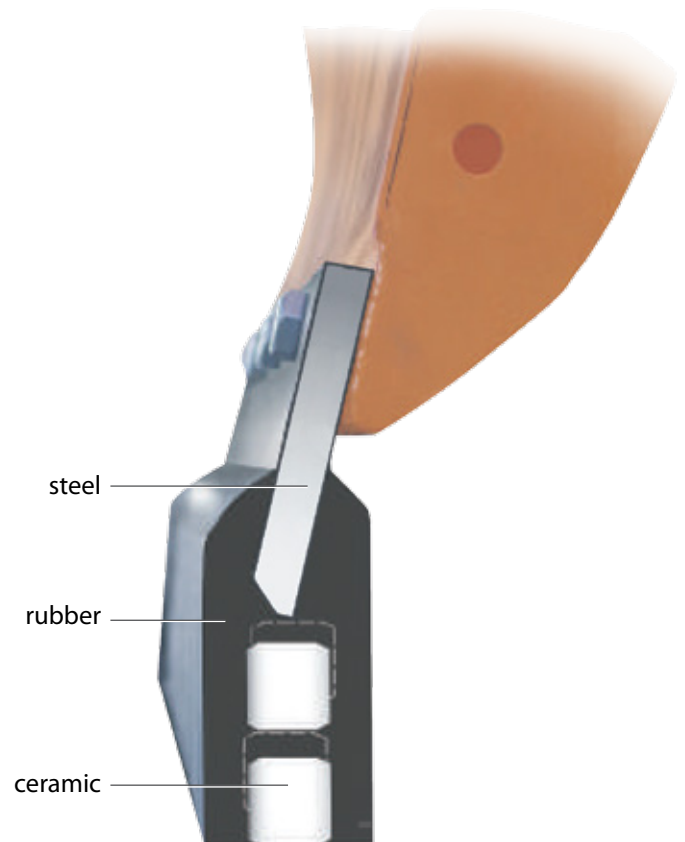

## RUBBER-CERAMIC BLADES MGK

Evolution Edges MGK rubber-ceramic blades are made by a specialized vulcanization manufacturing process, to deliver a high performance, quality blade.

The blade contains a core of flexible ceramic inserts surrounded by rubber formulated for the extreme winter environment, allowing the blade to remain more elastic to minimize plow vibration, noise and bounce. The blade is easy to mount and will not flip up with the built-in steel mounting plate.

The ceramic is specially formed to protect them against slipping or breaking. Additionally, the special form provides better sliding properties and smooth running. MGK designs are ideal for removing snow in aviation, city and municipal areas and which require proper road surface protection.

- ▶ protects road surface
- ▶ for raised markers
- ▶ quiet snow plowing
- ▶ for all road surfaces
- ▶ long service life

for proper use on following undergrounds:

highway

ordinary road

in town

airport runway

# Types of Evolution Edges cutting edges

Evolution Edges "M" series are manufactured individually to fit most snowplow moldboard designs. Due to our technical skills as well as a high knowledge and experience, we are able to optimize snow plowing efficiently. As a result, Evolution Edges cutting edges are available in many different types.
